Experience

Cybersecurity Engineer – Identity Access Management **July 2025 - Present**
Cognizant ***Chennai, Tamilnadu***

- Provided day-to-day operational support for SailPoint IdentityIQ (IIQ), troubleshooting user access issues, failed provisioning requests, account correlation problems, aggregation failures, and target application synchronization issues by analyzing application and provisioning logs.
- Supported SailPoint IdentityIQ application onboarding, including connector configuration, application schema updates, attribute mappings, aggregation task configuration, and end-to-end testing of Joiner-Mover-Leaver (JML) lifecycle scenarios.
- Contributed to the SailPoint IdentityIQ to Identity Security Cloud (ISC) migration initiative, gaining hands-on exposure to Virtual Appliance architecture, REST/API integrations, JSON-based configurations, and Transforms.
- Developed a lightweight HR onboarding/offboarding portal to capture employee lifecycle changes and integrate them with the identity management process, helping reduce manual access-request activities and improve JML processing.
- Supported identity and access administration across Microsoft Active Directory and Microsoft Entra ID, including user and group administration, SSO/enterprise application access, access requests, and administrative activities related to privileged accounts.
- Worked with non-human identities and service accounts, including standard service accounts and Group Managed Service Accounts (gMSA), with a focus on appropriate permissions and Principle of Least Privilege.
- Maintained a Windows Server 2016 Active Directory lab environment to strengthen practical IAM knowledge, including OU design, LDAP queries, Group Policy (GPO) configuration, delegated permissions, user/group administration, and testing of administrative access scenarios.

Identity Access Management – (AWS-IAM) **Aug 2024 - July 202**
Handigital PVT Ltd ***Banglore, Karnataka***

- Managed AWS IAM access by handling user, group, role, and permission assignments based on business and application requirements, following the Principle of Least Privilege.
- Developed a custom AWS IAM access request automation system using Python and Boto3, allowing end users to request the AWS access they require through a centralized workflow.
- Implemented an approval-based provisioning workflow where access requests were routed to managers for approval, after which Boto3 automatically assigned the approved IAM access, reducing manual administration and improving access governance.
- Implemented automated access review system for every quarter in the organization.

Project

Enterprise Identity & Access Management – SailPoint IdentityIQ

- Supported SailPoint IdentityIQ (IIQ) operations, including application onboarding, connector configuration, account aggregation, correlation, provisioning, and troubleshooting access-related issues.
- Worked on Joiner-Mover-Leaver (JML) lifecycle processes and supported identity access across Active Directory, Microsoft Entra ID, and Privileged Access Management (PAM) environments.
- Contributed to the IdentityIQ to Identity Security Cloud (ISC) migration initiative, gaining hands-on exposure to Virtual Appliance architecture, REST/API integrations, JSON configurations, Transforms, and PAM-related access controls.

Technical Proficiencies

Programming/Frameworks Languages: Java, Python, Beanshell, SailPoint IIQ & ISC, Gen-AI, Active Directory,

Tools/Technologies: Git, Postman, SCIM – API's for IIQ & ISC.

OS / Databases: Linux, MySQL.

Cloud Platforms: AWS.

Soft Skills: Team Player ,Problem-solving ,Continuous Improvement

Education

Annamacharya Institute of Technology and Sciences **CGPA: 8.7**
B-Tech in Computer Science and Engineering *Rajampet, AP*

Achievements & Contributions

- Earned the **SailPoint Identity Security Leader Credentials.**
- Received a Certificate of Recognition from Cognizant for successfully deploying an Autonomous HR Application using SCIM APIs for automated identity and user provisioning during the Vibe-Coding Event.
